|                                                                                                                                                                                                           |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>K.C. Chou</b><br>Preface.....                                                                                                                                                                          | 123 |
| <b>D. Fray</b><br>Renewable energy and the role of molten salts and carbon.....                                                                                                                           | 125 |
| <b>C. Wiraseranee, T. Yoshikawa, T.H. Okabe, K. Morita</b><br>Effect of $Al_2O_3$ , $MgO$ and $CuO_x$ on the dissolution behavior of rhodium in the $Na_2O-SiO_2$ slags.....                              | 131 |
| <b>N. Wang, M. Chen, Z. Zou, Z. Zhang, Y. Xiao, Y. Yang</b><br>Liquidus and phase equilibria in $CaO-Al_2O_3-FeO_x-SiO_2$ system under intermediate oxygen partial pressure.....                          | 139 |
| <b>B. Yan, R. Guo, J. Zhang</b><br>A study on phase equilibria in the $CaO-Al_2O_3-SiO_2-Nb_2O_5$ (5 mass pct) system in reducing atmosphere.....                                                         | 145 |
| <b>B. Zhao, P. Hayes, E. Jak</b><br>Effects of $CaO$ , $Al_2O_3$ and $MgO$ on liquidus temperatures of copper smelting and converting slags under controlled oxygen partial pressures.....                | 153 |
| <b>M. Sánchez, M. Sudbury</b><br>Physicochemical characterization of copper slag and alternatives of friendly environmental management.....                                                               | 161 |
| <b>V. Shatokha, A. Semykina, J. Nakano, S. Sridhar, S. Seetharaman</b><br>A study on transformation of some transition metal oxides in molten steelmaking slag to magnetically susceptible compounds..... | 169 |
| <b>H. Wang, M.M. Nzotta, L. Teng, S. Seetharaman</b><br>Decarburization of ferrochrome and high alloy steels with optimized gas and slag phases towards improved Cr retention.....                        | 175 |
| <b>J. Milshtein, E. Gratz, S. Pati, A.C. Powell, U. Pala</b><br>Yttria stabilized zirconia membrane stability in molten fluoride fluxes for low-carbon magnesium production by the SOM process.....       | 183 |
| <b>K.S. Coley</b><br>Progress in the kinetics of Slag-Metal-Gas reactions, past, present and future.....                                                                                                  | 191 |
| <b>X. Hou, K.C. Chou, B. Zhao</b><br>Reduction kinetics of lead-rich slag with carbon in the temperature range of 1073 to 1473 K.....                                                                     | 201 |
| <b>X. Hu, H. Wang, L. Teng, S. Seetharaman</b><br>Direct chromium alloying by chromite ore with the presence of metallic iron.....                                                                        | 207 |
| <b>G. Zhu, Y. Hao, C. Xia, Y. Zhang, T. Hu, S. Sun</b><br>Study on cementitious properties of steel slag.....                                                                                             | 217 |
| <b>D. Ma, M. Guo, M. Zhang</b><br>Preparation of polymeric aluminium ferric chloride from bauxite tailings.....                                                                                           | 225 |
| <b>K. Tang, A. Ciftja, C. van der Eijk, S. Wilson, G. Tranell</b><br>Recycling of the Rare Earth oxides from spent rechargeable batteries using waste metallurgical slags.....                            | 233 |
